

How Future Citizens of Smart Cities Take Benefit from Geofencing Technology

An Urban Air Pollution Alert Service for Smart Cities

8th GeoIT Wherecamp, 2018, Berlin, Germany

Airtify System

Targeted Use Case

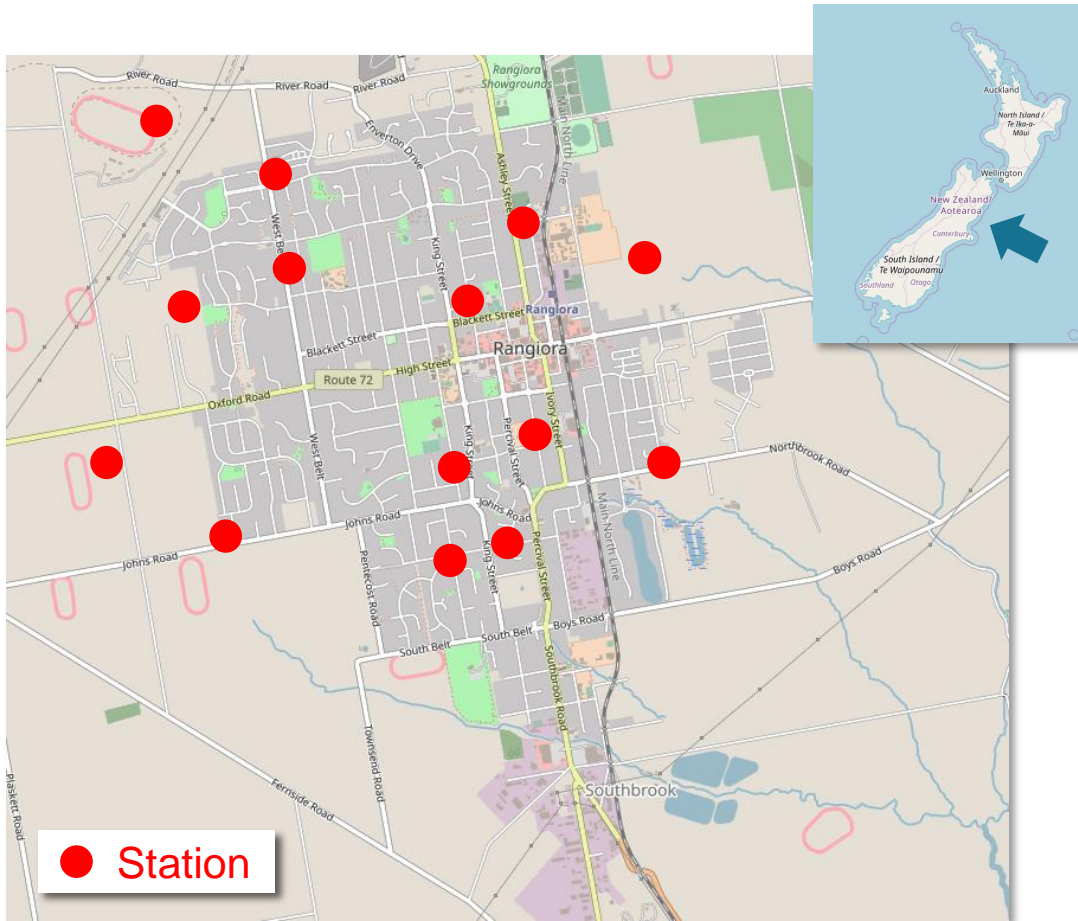

Airtify System

Big Picture

Airtify System

Sensor Testbed

- Rangiora, South Island, New Zealand
- Population: approx. 18.100
- Area: 16.83 km²
- Flat terrain with no high-rise buildings
- Equally distributed land-use characteristics

- 14 low-cost Outdoor Dust Information Nodes (ODIN)
- Measures particulate matter with diameter smaller or equal to 2.5 μm (PM2.5)
- Output in $\mu\text{g}/\text{m}^3$
- 18 days in August 2016
- One sample per min
- 26.394 combined samples (each incl. 14 samples)

Airtify System

Extraction of Critical Areas

5-10 $\mu\text{gr}/\text{m}^3$ 10-20 $\mu\text{gr}/\text{m}^3$ >20 $\mu\text{gr}/\text{m}^3$

Airtify System

Extraction of Critical Areas I

Airtify System

Extraction of Critical Areas II

Stage 1:

Collect

- One sample per minute
- Aggregate samples with different timestamps
- Assumption: Particulate matter concentration does not change significantly at a sampling frequency of 1/min

Add Grid

- Artificially increase the number of samples
- Enforce an evenly-distributed sample set

Interpolate

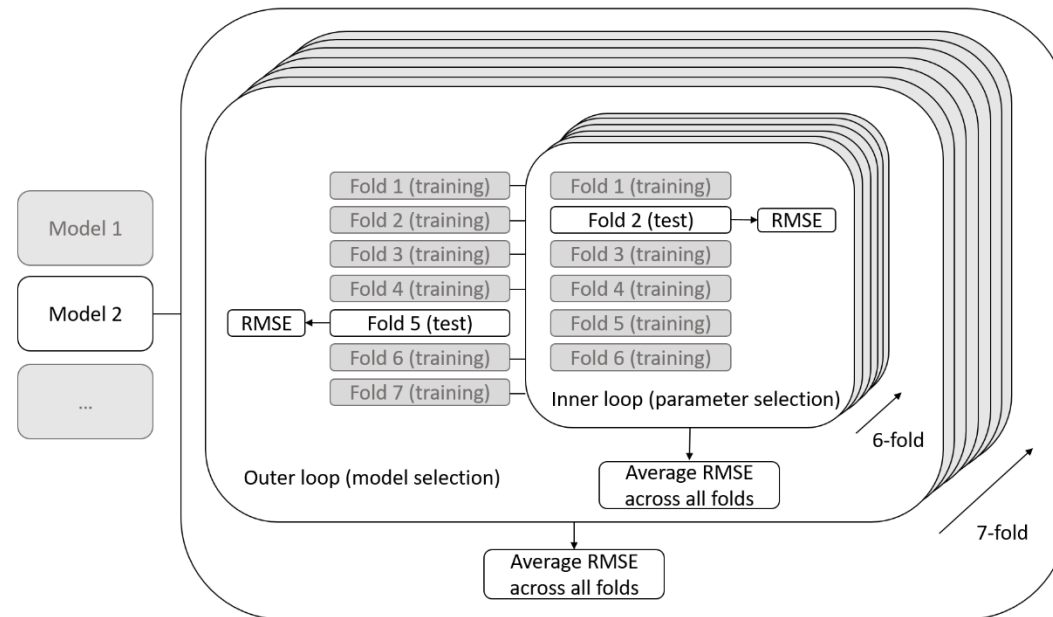

- Potential methods:
 - Proximity models
 - Dispersion models
 - Land-use regression
 - Non-parametric classification
 - Spatial interpolation
- Applied: Kernel regression with a Cauchy kernel

Airtify System

Extraction of Critical Areas III

Stage 1: Comparison of models for interpolation by k-fold-cross validation

Model	Number of Wins	Median RMSE
Gaussian	172	5.023
Cauchy	352	5.532
Epanechnikov	142	6.719
Uniform	281	6.043
Polynomial ²	48	5.685
Polynomial ³	1	6.153
Polynomial ⁴	1	4.927
Polynomial ⁵	2	7.218
Polynomial ⁶	1	3.718

Airtify System

Extraction of Critical Areas IV

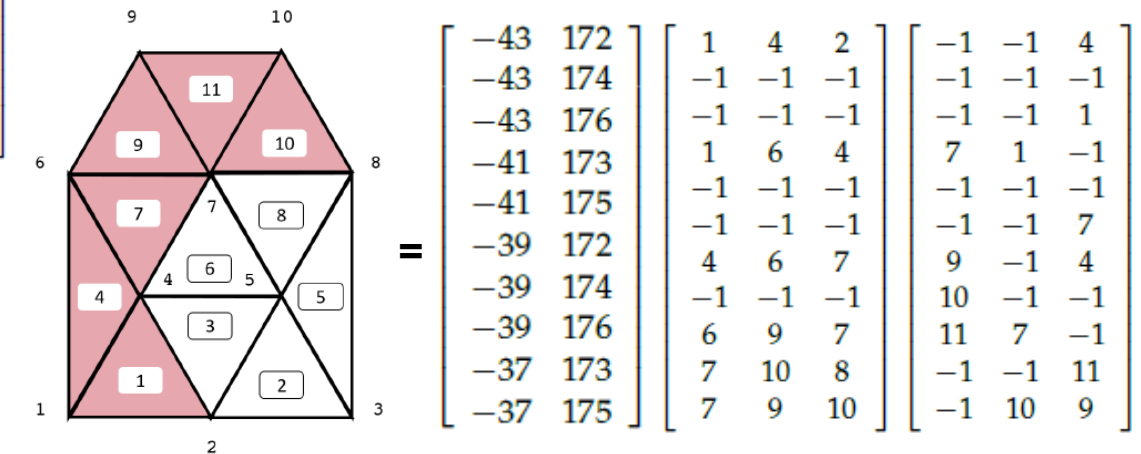

Triangulation (Delaunay)

```
"coordinates": [
  [
    172.59439945220947,
    -43.30104007235948
  ], ..., [
    172.5944423675537,
    -43.301227464575554
  ]
]
```

Marking (Excluding Points)
